GenForward Early October 2016 Toplines

**The first of its kind monthly survey of racially and ethnically diverse
young adults**

**GenForward is a survey of the Black Youth Project at the University of Chicago with The
Associated Press-NORC Center for Public Affairs Research**

Interviews: 10/1-14/2016

1,832 adults 18-30

Margin of error: +/- 3.8 percentage points at the 95% confidence level among adults 18-30

NOTE: All results show percentages among all respondents, unless otherwise labeled.

Q1. If the general election were held today, and the candidates were Hillary Clinton for the Democrats, Donald Trump for the Republicans, Gary Johnson for the Libertarian Party, and Jill Stein for the Green Party, for whom would you vote?

[CLINTON/TRUMP ASKED IN REVERSE ORDER FOR HALF OF SAMPLE]

	African American adults 18-30	Asian American adults 18-30	Latino/a adults 18-30	White adults 18-30	All adults 18-30
Hillary Clinton	59	52	44	35	42

Study Methodology

The Early October GenForward survey is a project of the Black Youth Project at the University of Chicago, with The Associated Press-NORC Center for Public Affairs Research. Interviews were conducted with a representative sample from GenForward®, a nationally representative survey panel of adults ages 18-30 recruited and administered by NORC at the University of Chicago and funded by grants to the Black Youth Project at the University of Chicago from the John D. and Catherine T. MacArthur Foundation and the Ford Foundation.

A total of 1,832 interviews were conducted between October 1 and 14, 2016 with adults ages 18-30 representing the 50 states and the District of Columbia, including completed interviews with 520 African American young adults, 257 Asian American young adults, 510 Latino/a young adults, 508 white young adults, and 37 young adults with other racial and ethnic backgrounds. The survey was offered in English and Spanish and via telephone and web modes.

The GenForward survey was built from two sample sources:

- Fifty-two percent of the completed interviews are sourced from NORC's AmeriSpeak® Panel. AmeriSpeak is a probability based panel that also uses address-based sample but sourced from the NORC National Frame with enhanced sample coverage. During the initial recruitment phase of the AmeriSpeak panel, randomly selected U.S. households were sampled with a known, non-zero probability of selection and then contacted by U.S. mail, email, telephone, and field interviewers (face-to-face).
- Forty-eight percent of the completed interviews are sourced from the Black Youth Project (BYP) panel of young adults recruited by NORC. The BYP sample is from a probability-based household panel that uses an address-based sample from a registered voter database of the entire U.S. Households were selected using stratified random sampling to support over-sampling of households with African Americans, Latino/as, and Asian Americans ages 18-30. NORC contacted sampled households by U.S. mail and by telephone, inviting them to register and participate in public opinion surveys twice a month.

Panelists on both the BYP and AmeriSpeak panels are invited to register for the panel via the web or by telephone to participate in public opinion surveys.

Of the 1,832 completed interviews in the Early October GenForward survey, 96% were completed by web and 4% by telephone. The survey completion rate is 36 percent. The weighted household panel recruitment rate is 19.4 percent and the weighted household panel retention rate is 94.8 percent, for a cumulative AAPOR Response Rate 3 of 6.6 percent. The overall margin of sampling error is +/- 3.8 percentage points at the 95 percent confidence level, including the design effect. Among subgroups, the margin of sampling error at the 95 percent confidence level is +/- 5.9 percentage points for African Americans, +/- 8.9 percentage points for Asian Americans, +/- 6.4 percentage points for Latino/as, and +/- 5.9 percentage points for whites.

To encourage cooperation, respondents were offered incentives for completing the survey that ranged from the cash-equivalent of \$3 to the cash-equivalent of \$10.

The interviews from the two probability-based sample sources were combined for statistical weighting and analysis. The combined panel samples provide sample coverage of approximately 97% of the U.S. household population. Those excluded from the sample include people with P.O. Box only addresses, some addresses not listed in the USPS Delivery Sequence File, and some newly constructed dwellings. The statistical weights incorporate the appropriate probability of selection for the BYP and AmeriSpeak samples, nonresponse adjustments, and also, raking ratio adjustments to population benchmarks for 18-30 year old adults. A poststratification process is used to adjust for any survey nonresponse as well as any non-coverage or under- and over-sampling resulting from the study-specific sample design. The poststratification process was done separately for each racial/ethnic group and involved the following variables: age, gender, education, and census region. The weighted data, which reflect the U.S. population of adults ages 18-30, and the 18-30 year-old populations for African Americans, Latino/as, Asian Americans, and non-Latino/a whites, were used for all analyses.
